

Telia Finland AI Immersion Day Discovery Brief

Telia Finland is entering this immersion day from a position that is strategically important but operationally tight. The Finland business remains one of Telia Company's core country units, with FY2025 revenue of SEK 14,956m and adjusted EBITDA of SEK 4,682m, but Q1 2026 service revenue growth in Finland was only 0.3% like-for-like while mobile service revenue was down 2.0% and mobile postpaid subscriptions were down 79,000 year on year. At the same time, Finland is one of Europe's most demanding telecom markets: 5G coverage is already 99.5%, mobile data use is the highest in the Nordic-Baltic comparison at 74 GB per capita per month in 2024, fibre availability reached 80% of households by September 2025, and the three-player structure remains brutally competitive across consumer, SME, and fixed access. Public evidence shows Telia Company is serious about AI at group level, with AI now explicitly deployed across customer service, networks, and internal processes, but the public record is far stronger on ambition than on Finland-specific scaled execution. The most useful way to frame the day, therefore, is not "where can Telia try AI," but "where is Telia Finland already under enough business pressure that a mixed room of leaders will feel the pain immediately." ¹

Telia Finland snapshot

Telia Finland operates as one of Telia Company's country-based operating segments. Telia Company's February 2026 hybrid prospectus says the group's organizational structure is country-based and, at the end of 2025, comprised Sweden, Finland, Norway, Estonia, Lithuania, and Other operations. The same prospectus also confirms that the 2021 tower transaction carved out tower assets into Telia Towers, while Telia's Finnish fibre posture has increasingly shifted toward partnership and capital discipline rather than wholly owned rollout. ²

A meaningful structural change since 2024 is that Telia moved to a country-led operating model and, from January 1, 2025, removed the tower businesses in Sweden, Finland, and Norway from the country units so that Telia Towers would instead be reported under Other operations. In Finland specifically, Holger Haljand was appointed Senior Vice President, Head of Telia Finland, effective February 1, 2025. A separate management change signal from Telia Finland's public LinkedIn activity shows Terhi Horppu was appointed Finland finance director and management team member effective August 25, 2025. ³

The latest public operating picture is below.

Metric	Latest public read
Legal / reporting position	Finland is a core country segment within Telia Company's country-based organization at end-2025, with tower assets reported separately under Telia Towers in Other operations (Telia Company prospectus, Feb. 13, 2026; Telia pre-Q1 2025 note, 2025). ⁴
Revenue	SEK 14,956m for FY2025 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
Service revenue	SEK 12,844m for FY2025 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵

Metric	Latest public read
Adjusted EBITDA	SEK 4,682m for FY2025 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
EBITDA margin	31.3% for FY2025, analyst calculation based on SEK 4,682m EBITDA / SEK 14,956m revenue (underlying numbers: Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
Q1 2026 momentum	Service revenue +0.3% like for like; adjusted EBITDA +1.3% like for like; mobile service revenue -2.0%; business solutions +5.1% (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
Subscriber base	2,396k mobile postpaid subscriptions excluding M2M, 627k broadband subscriptions, and 659k TV subscriptions at March 31, 2026 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
ARPU	EUR 19.3 mobile postpaid, EUR 12.5 broadband, EUR 6.9 TV in Q1 2026 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
B2B concentration	Telia's own pre-Q1 2025 note said "about 50%" of Telia Finland revenue comes from Enterprise customers (Telia pre-Q1 2025 note, 2025). ⁶
Headcount	Average employees in Finland were 3,912 in 2024; this is the latest public country-level figure found in the reviewed sources, and should be treated as the latest disclosed rather than a current real-time employee count (Telia Annual Report 2024, Apr. 9, 2025). ⁷

A useful cross-market comparison is that Finland is currently Telia's second-largest country business after Sweden, but its growth profile is materially weaker than Sweden and Lithuania.

Telia country unit	Service revenue growth in Q1 2026	Service revenue in Q1 2026	Adjusted EBITDA margin in Q1 2026
Sweden	+3.0% like for like (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵	SEK 8,281m (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵	39.7% (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
Finland	+0.3% like for like (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵	SEK 3,077m (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵	31.4% (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
Norway	-0.1% like for like (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵	SEK 2,869m (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵	45.2% (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
Lithuania	+7.5% like for like (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵	SEK 1,128m (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵	41.5% (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵

Telia country unit	Service revenue growth in Q1 2026	Service revenue in Q1 2026	Adjusted EBITDA margin in Q1 2026
Estonia	+0.6% like for like (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁸	SEK 845m (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁸	41.8% (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁸

Publicly visible strategic priorities for Finland are not laid out in a single Finland-only strategy deck, but the strongest current signals point to three near-term priorities: stabilize the consumer mobile business; accelerate business solutions plus mission-critical and security services; and deepen the converged fibre/mobile household proposition through Valokuitunen and broader broadband growth. That is an analyst inference drawn from Telia's Q1 2026 Finland commentary, the Valokuitunen ownership increase from 40% to 49%, and repeated management commentary about stronger momentum in business- and mission-critical services. ⁹

Market context and structural pressures

Finland is a compact but intense three-player market. Traficom's latest turnover figures show Elisa held 37% of Finnish telecommunications turnover in 2023, Telia Finland 29%, DNA 23%, and others 11%. On national mobile subscriptions in 2024, Traficom's market-analysis draft put Elisa at about 38%, DNA at about 31%, Telia at about 30%, and others at about 1%. For fixed broadband in 2024, a recent country report citing Traficom data put DNA at 34%, Elisa at 31%, and Telia at 24%. ¹⁰

Finnish market structure	Elisa	Telia Finland	DNA
Telecom turnover share, 2023	37% (Traficom news release, Sept. 25, 2024). ¹¹	29% (Traficom news release, Sept. 25, 2024). ¹¹	23% (Traficom news release, Sept. 25, 2024). ¹¹
National mobile subscription share, 2024	~38% (Traficom market analysis, Nov. 14, 2025). ¹²	~30% (Traficom market analysis, Nov. 14, 2025). ¹²	~31% (Traficom market analysis, Nov. 14, 2025). ¹²
Fixed broadband share, 2024	31% (secondary report citing Traficom, 2025). ¹³	24% (secondary report citing Traficom, 2025). ¹³	34% (secondary report citing Traficom, 2025). ¹³

The underlying network context is demanding. Finland had 9 million mobile subscriptions in use at end-2025 and 3.8 million 5G-enabled subscriptions. 5G coverage stood at 99.5%, versus an EU average of 94%. Finland also remains the Nordic-Baltic leader in mobile data consumption at 74.0 GB per capita per month in 2024, while a typical smartphone subscription used 8 GB per month by the median measure and 30 GB by the simple average in autumn 2025. On the fixed side, fibre availability reached 80% of Finnish households by September 2025, up 12 percentage points year on year, and fibre accounted for 82% of fixed broadband subscriptions in Finland in 2024, up from 66% in 2023, with Traficom noting that both definition changes and real growth contributed to the jump. ¹⁴

The structural headwinds that matter most in 2025–2026 are clear.

- **Revenue growth is still thin relative to infrastructure intensity.** Telia finished 2025 with revenue of SEK 81.0bn and CAPEX excluding licenses, spectrum fees and right-of-use assets of SEK 13.443bn, which implies a capital intensity of about 16.6% on an analyst calculation. Elisa's 2025 annual report shows EUR 280m of capital expenditure on EUR 2.36bn revenue, or about 11.9%. Telenor's 2026 outlook for the Nordics is around 14% CAPEX-to-sales. By comparison, Connect Europe's 2024 report said European telco capital intensity was around 20% in 2022 and still above the USA, Japan, and South Korea. ¹⁵ |
- **Traffic keeps rising faster than monetization.** Finland's leading position on 74.0 GB mobile traffic per capita per month in 2024 and 3.8 million 5G-enabled subscriptions at end-2025 sits against Telia Finland's Q1 2026 service revenue growth of only 0.3% and a 2.0% decline in mobile service revenue. That gap is the operating reality behind many productivity and automation discussions. ¹⁶ |
- **Legacy fixed voice continues to die away.** Traficom's Nordic-Baltic comparison shows Finland had only 0.03 fixed telephony subscriptions per capita in 2024, and fixed-call usage continues its long-term decline. Connect Europe's 2025 report also noted Telia Company among operators expected to complete copper shutdown by 2026. ¹⁷ |
- **The enterprise battleground is moving toward security, cloud-adjacent services, and mission-critical operations.** Telia's own Q1 2026 commentary said demand remained robust for security and mission-critical services, while Finland saw increased momentum in business- and mission-critical services. Elisa, meanwhile, continued to report growth from international software services in 2025, and Telenor described DNA's Q4 2025 performance as supported by ARPU growth and a larger fixed wireless base. The competitive benchmark is no longer only connectivity. ¹⁸ |
- **Regulation is being rewritten while AI obligations are hardening.** BEREC's 2024 and 2025 input to the European Commission positioned copper switch-off, investment incentives, infrastructure access, and resilience as active regulatory issues. The Commission published its proposed Digital Networks Act on January 21, 2026. Telia's own prospectus states the AI Act already has rules in force on AI literacy and prohibited uses, and that most remaining obligations start to apply from August 2, 2026. ¹⁹ |
- **Cyber risk and digital trust are rising faster than most organizations can staff for.** Telia's 2024 security foresight report says hacker attacks and cyber-crime are escalating rapidly, while a 2025 Traficom research report described Finland's cyber-security level as high but uneven, with SMEs facing financing and skills bottlenecks. That creates direct relevance for Telia's B2B security offer and internal risk posture at the same time. ²⁰ |

The practical market read for the immersion day is that Telia Finland sits in a paradoxical position: it operates in one of Europe's most digitally mature telecom markets, but that maturity makes growth harder, not easier. This is a market where 5G coverage is nearly universal, fibre is scaling fast, ARPU growth is modest, and market share shifts are difficult to win cheaply. That is exactly the kind of environment where internal productivity, cross-sell precision, customer retention timing, and regulatory-grade governance start to matter as much as network quality itself. That final sentence is analyst inference, but it is strongly supported by the market and company data above. ²¹

Telia Finland specific pressures

The pressures that are most specific to Telia Finland, rather than generic to European telecom, cluster around five issues.

First, **consumer mobile is under visible pressure even while broadband is improving**. In Q1 2026, Telia Finland's mobile postpaid base excluding M2M fell by 79,000 year on year, while mobile service revenue declined 2.0% like for like. In the same quarter, broadband subscriptions increased by 9,000 year on year and broadband ARPU increased 8.2% to EUR 12.5. Telia's own commentary said "competitive pressures continued in the mobile consumer business," even as business- and mission-critical services gained momentum. ²²

Second, **enterprise matters disproportionately in Finland**, which makes B2B execution central to the country's future. Telia's own pre-Q1 2025 commentary said about half of Finland revenue comes from Enterprise customers. In 2025, Finland business solutions revenue was SEK 2,913m, equivalent to about 22.7% of Finland service revenue on an analyst calculation. Q1 2026 business solutions revenue then grew 5.1% year on year, and Telia also became an approved NATO framework supplier in the quarter. That mix is unusually relevant for a room that includes large-corporate sales, SME leadership, B2B marketing, customer operations, and the CEO. ²³

Third, **Telia Finland is changing its infrastructure ownership model rather than simply spending through it**. In March 2026 Telia agreed to increase its ownership in Valokuitunen from 40% to 49%. A recent Valokuitunen industry paper said the JV had cable coverage of around 400,000 homes by 2024 and bought Telia's remaining household fibre networks in September 2024, adding more than 31,000 homes passed across 72 municipalities. This is not just a finance footnote; it tells you Telia Finland is trying to build convergence with a more capital-efficient fibre model. The numbers on Valokuitunen's homes-passed are from a secondary industry paper, not from Telia's own filing, but they are directionally important. ²⁴

Fourth, **management simplification is now landing directly in Finland**. Telia Company's September 2024 change program targeted annual savings of at least SEK 2.6bn. In Q1 2026 Telia Finland announced a proposed net reduction of around 200 positions as part of ongoing efforts to improve efficiency and simplify the organization. This is an obvious sensitivity for facilitators, but it is also precisely why productivity, automation, and change-management challenges will feel real in the room. ²⁵

Fifth, **the media/business boundary shifted in 2025, but the customer proposition still depends on content bundling**. Telia signed the agreement to divest TV & Media, including MTV in Finland, in February 2025 and completed the transaction with Schibsted on July 1, 2025. Yet Telia Finland's consumer site still prominently bundles and resells services such as MTV Katsomo and other streaming offers. That means Telia has exited media ownership while keeping media-adjacent commercial complexity in the customer journey. ²⁶

One more Finland-specific signal matters: Telia, Nokia, and the Finnish Defence Forces achieved what Telia described as the world's first standalone 5G slice handover between multiple countries in a live network in April 2025. Combined with Telia's later approval as a NATO framework supplier, this suggests Finland is an important proving ground for mission-critical and sovereign-connectivity use cases inside the broader Telia group. That does not automatically mean the Finland unit is ahead in every internal capability, but it does mean senior leaders will likely recognize "defensible digital infrastructure" as strategically meaningful, not just technical. ²⁷

AI posture and tech stack signals

The highest-confidence public conclusion is that **Telia Company now frames AI as an operating capability, not a side experiment**. Telia's 2025 annual report says the company accelerated the introduction of AI into customer service processes during 2025 and that routine enquiries are increasingly handled autonomously. In Q1 2026, Patrik Hofbauer said Telia was deploying AI across customer service, networks, and internal processes. The 2024 annual report had already said AI and generative AI impact all areas and explicitly pointed to customer service, marketing, coding, and networks as application areas. ²⁸

The second high-confidence conclusion is that **the governance language is maturing alongside the ambition**. Telia's human-rights materials now explicitly say the company has strengthened commitments on AI ethics and responsible AI aligned with its Ethical Guiding Principles. The March 2026 Group Policy on Human Rights states that AI and data-driven technologies should be developed and used responsibly, in line with fairness, transparency, and accountability. Telia's prospectus then makes the near-term regulatory clock explicit: AI literacy rules and prohibited use rules are already in force, and most remaining AI Act obligations apply from August 2, 2026. ²⁹

Where is AI clearly public in production or near-production?

Area	Best public evidence	Read for immersion day
Customer service	Telia says AI was accelerated into customer service during 2025 and routine enquiries are increasingly autonomous (Telia Annual Report 2025, Apr. 9, 2026). ³⁰	This is the strongest and most explicit production signal.
Networks	Telia says AI is being deployed across networks; Finland is also a proving ground for advanced 5G SA slicing with Nokia and the Finnish Defence Forces (Telia Q1 2026, Apr. 24, 2026; Telia/Nokia/FDF release, Apr. 9, 2025). ³¹	Strong ambition signal; specific Finland operations use cases are still only partly disclosed.
Internal productivity	Telia says AI is being deployed across internal processes, and older company strategy material named coding as one application area (Q1 2026; Annual Report 2024). ³²	Real internal demand is likely high; public proof points remain broad rather than operationally detailed.
Fraud / security	Telia reported in Q3 2025 that the Telia Safe app includes online security, privacy, and fraud prevention features (Telia Q3 2025, Oct. 23, 2025). ³³	Relevant for CISO-led and customer-trust challenges.
Enterprise offer	Telia launched an AI-enabled IoT platform in October 2025 (Telia news, Oct. 2, 2025). ³⁴	Shows AI is entering the product portfolio, not just internal tooling.
Finland customer operations	A NICE case study says Telia Finland used RPA, attended automation, AI, and advanced analytics in a CX improvement program (NICE case study; date not surfaced in snippet, vendor source). ³⁵	Useful directional signal, but it is vendor marketing and should not be over-weighted.

The most important gap is this: **public ambition is obvious, but Finland-specific scaled execution is much less visible**. The public record reviewed here strongly supports group-level movement in customer service and broad enterprise/internal adoption, but it gives much thinner evidence on Finland-specific production deployments in OSS, NOC, sales operations, finance, or HR. That matters because this audience is cross-functional. A facilitator should therefore expect some participants to be living inside real deployments while others experience “AI” mainly as a program narrative. That is analyst inference based on the uneven distribution of public evidence. ³⁶

The **best-available public read on the stack** is mixed-confidence rather than definitive.

Stack domain	Public signal	Confidence
Core telecom CRM / CPQ / BSS	Telia Finland’s Salesforce/Vlocity deployment for CRM, CPQ, and BSS was publicly reported in 2017. This is dated and should be treated only as a legacy signal, not current proof of present architecture. ³⁷	Low
Contact center platform	Telia ACE is an in-house / group-branded contact-center platform with AI capabilities in product marketing and events; Telia ACE product leadership publicly discusses AI use in contact centers. ³⁸	Medium
Customer-operations automation	NICE case study points to Telia Finland use of RPA, attended automation, AI, and analytics. Vendor source, but Finland-specific. ³⁵	Medium
Risk / governance platform	ServiceNow materials describe Telia using a single GRC platform with trustworthy data on threats, vulnerabilities, and assets. Vendor source, but consistent with a mature enterprise risk posture. ³⁹	Medium
Network vendors in Finland	Nokia is explicitly confirmed in Finland mission-critical 5G SA slicing with the Finnish Defence Forces. Broader 2025 group announcements point to continued Nokia and Ericsson strategic roles, but the Finland-specific current split is not fully public in the reviewed material. ⁴⁰	Medium
Fibre footprint / access model	Valokuitunen is the clearest current signal: Telia increased ownership from 40% to 49% in 2026, showing a JV/open-access-oriented fibre strategy. ²⁴	High
Cloud / developer tooling	Telia Cygate in Helsinki publicly hired for Microsoft 365 architecture in 2025. This is a signal of Microsoft ecosystem depth in the broader Telia Finland services environment, but not definitive proof of Telia Finland core stack choices. ⁴¹	Low
Data platform	No high-confidence current public proof was found in the reviewed sources for a Finland-specific commitment to Snowflake, Databricks, or Microsoft Fabric. A BlueConic case study indicates customer-data-platform usage at Telia Company level, but this is secondary and not Finland-specific. ⁴²	Low

A facilitator should therefore walk in assuming the following: Telia Finland almost certainly has more tooling and more experimentation than the public record shows; the room will include people who

know the stack deeply; and any challenge discussion that drifts into “what platform are you on?” will waste time unless it is tied to a hard business problem. The smart move is to frame the day around failures in flow, handoff, prioritization, and decision latency, and let the architecture discussion emerge only where it is necessary. That is analyst advice rather than a sourced fact.

Challenge surface

The challenge statements below are deliberately framed as business problems, not solution briefs. Where Telia-specific internal KPIs are not public, the closest defensible Telia, peer, or industry proxy is used and labeled.

Title — Field dispatch burns time before work starts

Challenge statement — “We spend too much effort getting people to the job before the actual fix begins. Access constraints, spare availability, repeated visits, and incomplete job context turn a simple field task into an expensive chain of delay.”

Why now

- Finland fibre availability reached 80% of households by September 2025, up 12 percentage points year on year, increasing the footprint that has to be built, serviced, and supported (Traficom, Apr. 10, 2025). ⁴³
- Telia increased its stake in Valokuitunen from 40% to 49% in March 2026, reinforcing that fibre/convergence execution is central now, not later (Telia, Mar. 2, 2026). ⁴⁴
- Finland had 3.8 million 5G-enabled subscriptions at end-2025, meaning field complexity now spans mobile, fixed, and converged customer promises at once (Traficom, Apr. 11, 2025). ⁴⁵

Baseline metrics

- [Telia] 627k broadband subscriptions at March 31, 2026 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Telia] 2,396k mobile postpaid subscriptions excluding M2M at March 31, 2026 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Telia] Finland CAPEX excluding spectrum and leases was SEK 1,371m in FY2025 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Industry Finland] Fibre availability reached 80% of households in September 2025, up 12 percentage points year on year (Traficom, Apr. 10, 2025). ⁴³
- [Secondary, Finland] Valokuitunen covered around 400,000 homes by 2024 and added more than 31,000 homes passed in September 2024 via Telia’s remaining household fibre assets (Valokuitunen industry paper, 2026). ⁴⁶

Supporting evidence

- Telia is explicitly using Valokuitunen to strengthen its converged service proposition in Finland. ⁴⁴
- Finland is one of the fastest-improving fibre markets in the Nordics and Baltics, which increases planning and execution load. ⁴⁷
- Telia Finland still has meaningful scale in both fixed broadband and mobile, making dispatch errors cross-product expensive. ⁵

Audience fit — Head of Operations Networks, Head of OSS, Head of Infra & ICT Supply Chain, Director Service Management Assurance & Operations.

Cross-functional hooks — CIO, Head of IT Execution & PMO, Finance Director, B2C Operations, B2B Customer Operations.

Title — Alarm noise hides faults until customers complain

Challenge statement — “We have more telemetry than ever, but that does not mean we see what matters soon enough. Too much of the team’s time goes into interpreting noise, correlating symptoms across domains, and explaining service impact after the fact.”

Why now

- Finland had 99.5% 5G coverage by the latest Digital Decade reporting and 3.8 million 5G-enabled subscriptions by end-2025, which raises the volume and complexity of events that operations teams must interpret (Traficom, Apr. 11, 2025). ⁴⁸
- Telia publicly says it is deploying AI across networks, implying network operations is already in play strategically (Telia Q1 2026, Apr. 24, 2026). ⁴⁹
- Telia, Nokia, and the Finnish Defence Forces demonstrated live standalone 5G slice handover across countries in April 2025, a sign of operational complexity moving upward, not downward (Telia, Apr. 9, 2025). ⁵⁰

Baseline metrics

- [Industry Finland] 99.5% 5G coverage in the latest Digital Decade monitoring cited by Traficom (Traficom, Apr. 11, 2025). ⁵¹
- [Industry Finland] 3.8m 5G-enabled subscriptions at end-2025 (Traficom, Apr. 11, 2025). ⁴⁵
- [Industry Finland] 74.0 GB mobile data per capita per month in 2024, the highest in the Nordic-Baltic comparison (Traficom Nordic-Baltic statistics, Nov. 10, 2025). ⁵²
- [Telia] 2,396k mobile postpaid subscriptions excluding M2M at March 31, 2026 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Telia] Finland CAPEX excluding spectrum and leases was SEK 284m in Q1 2026 and SEK 1,371m in FY2025 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵

Supporting evidence

- Telia has already named networks as one of the areas where AI is being deployed. ⁴⁹
- Finland is a market with extremely high mobile data usage and near-universal 5G coverage, which raises the operational premium on signal quality. ⁵³
- Mission-critical 5G slicing activity in Finland raises the cost of slow correlation and poor root-cause visibility. ⁵⁰

Audience fit — Head of OSS, Head of Operations Networks, Director Service Management Assurance & Operations, Security Specialist.

Cross-functional hooks — CISO, CIO, Head of Business Intelligence, Product Owner, Release Manager.

Title — Care journeys restart every time the channel changes

Challenge statement — “Customers contact us too many times to solve one issue, and each handoff makes them repeat context we should already know. The organization experiences it as queues and transfers; the customer experiences it as not being understood.”

Why now

- Telia says it accelerated AI in customer service during 2025 and that routine enquiries are increasingly handled autonomously, which usually means the unresolved, high-friction cases left for humans become harder, not easier (Telia Annual Report 2025, Apr. 9, 2026). ³⁰
- Finland consumer mobile remains under competitive pressure while fixed and business solutions improve, making care quality a retention lever instead of a support cost line only (Telia Q1 2026, Apr. 24, 2026). ⁵⁴
- Telia Finland has scale across mobile, broadband, and TV, so cross-product care fragmentation compounds quickly (Telia Q1 2026, Apr. 24, 2026). ⁵

Baseline metrics

- [Telia] 2,396k mobile postpaid subscriptions excluding M2M at March 31, 2026 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Telia] 627k broadband subscriptions at March 31, 2026 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Telia] 659k TV subscriptions at March 31, 2026 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Telia] Finland service revenue was SEK 3,077m in Q1 2026 and SEK 12,844m in FY2025 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Vendor directional signal] Telia Finland's CX program used RPA, attended automation, AI, and analytics (NICE case study, undated in snippet). ³⁵

Supporting evidence

- Telia now publicly describes customer-service automation as a group priority. ³⁰
- Telia Finland's commercial exposure spans three major customer-product lines, increasing the cost of poor channel continuity. ⁵
- The reviewed public record points to existing automation work in Finland customer operations, meaning the next problem is likely orchestration, not whether automation exists at all. ³⁵

Audience fit — Head of B2B Customer Operations, Head of Sales Support B2C, Director Service Management Assurance & Operations, CRM & Development Lead.

Cross-functional hooks — Head of OSS, CIO, Head of Business Intelligence, Senior Process Manager B2B, Brand Manager.

Title — Account teams spend too long assembling answers

Challenge statement — “Our large-account sellers and customer teams lose hours pulling together pricing, delivery, assurance, security, and network context before they can even respond properly. That makes us slower than the customer expects and slower than the opportunity window allows.”

Why now

- Telia's own pre-Q1 2025 communication said about 50% of Finland revenue comes from Enterprise customers, so seller productivity is a country-level issue, not a side topic (Telia pre-Q1 2025 note, 2025). ⁶
- Finland business solutions revenue grew 5.1% in Q1 2026 and Telia was approved as a NATO framework supplier, raising the importance of complex, multi-stakeholder B2B selling (Telia Q1 2026, Apr. 24, 2026). ⁵
- Telia says enterprise-market demand remains robust in security and mission-critical services, where response quality and speed matter more than brochure-level selling (Telia Q1 2026, Apr. 24, 2026). ⁵⁵

Baseline metrics

- [Telia] About 50% of Telia Finland revenue comes from Enterprise customers, according to Telia's pre-Q1 2025 note (Telia, 2025). ⁶
- [Telia] Business solutions revenue in Finland was SEK 2,913m in FY2025 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Telia, analyst calculation] Business solutions were about 22.7% of Finland service revenue in FY2025, based on SEK 2,913m over SEK 12,844m (underlying Telia numbers: Apr. 24, 2026). ⁵
- [Telia] Business solutions revenue grew 5.1% in Q1 2026 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Telia] Finland service revenue totaled SEK 12,844m in FY2025 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵

Supporting evidence

- Telia's Q1 2026 commentary explicitly highlighted stronger momentum in business- and mission-critical services in Finland. ⁵⁴
- NATO supplier approval creates new complex-opportunity surface area. ⁵
- Finland's enterprise mix is unusually consequential for the country P&L. ⁶

Audience fit — Head of Large Corporate Customers, Account Management Large Corp, Head of SME Customers, Head of B2B Development.

Cross-functional hooks — CISO, Head of OSS, Director B2B Marketing/CIE & B2B Digital Ops, Finance Director.

Title — SME growth is stuck in a three-player fight

Challenge statement — "We are competing in a market where everyone has nationwide capabilities and customers can compare prices instantly. The result is that too much growth depends on discounts and too little comes from timing, relevance, and execution."

Why now

- Finland remains a tightly contested three-player market with Telia at about 29% telecom turnover share, behind Elisa at 37% and ahead of DNA at 23% on 2023 figures (Traficom, Sept. 25, 2024). ¹¹
- In mobile subscriptions, Telia is roughly level with DNA and behind Elisa; in fixed broadband, it trails both Elisa and DNA (Traficom / cited Traficom data, 2025). ⁵⁶

- Telenor's Q3 2025 commentary showed DNA adding 28,000 mobile and 3,000 fixed customers, signaling that share pressure is active, not theoretical (Telenor transcript, Oct. 29, 2025). ⁵⁷

Baseline metrics

- [Industry Finland] Telia Finland telecom turnover share was 29% in 2023; Elisa 37%; DNA 23% (Traficom, Sept. 25, 2024). ¹¹
- [Industry Finland] Mobile subscription share in 2024 was about 30% for Telia, 38% for Elisa, and 31% for DNA (Traficom, Nov. 14, 2025). ¹²
- [Industry Finland] Fixed broadband share in 2024 was 24% for Telia, 31% for Elisa, and 34% for DNA (secondary report citing Traficom, 2025). ¹³
- [Industry Finland] There were 9m mobile subscriptions in use in Finland at end-2025 (Traficom, Apr. 11, 2025). ⁵⁸
- [Peer Finland] DNA grew service revenues 2% year over year in Q3 2025 with 28k mobile net adds and 3k fixed net adds (Telenor transcript, Oct. 29, 2025). ⁵⁷

Supporting evidence

- The Finnish operator market is mature, numerically concentrated, and hard to outgrow through network parity alone. ⁵⁹
- DNA's publicly reported customer additions show pressure in both mobile and fixed. ⁵⁷
- Telia trails the market leader in both mobile and fixed share, which sharpens execution demands in SME. ⁵⁶

Audience fit — Head of SME Customers, Client Manager SME, Head of B2B Marketing, Director B2B Marketing/CIE & B2B Digital Ops.

Cross-functional hooks — Head of B2B Customer Insights, CRM & Development Lead, Finance Director, Head of Business Intelligence.

Title — Retention signals arrive after the customer has left

Challenge statement — “We often understand churn too late, after the customer has already shown us what mattered through complaints, silence, or partial disengagement. By then we are trying to explain the loss rather than prevent it.”

Why now

- Telia Finland's mobile postpaid base excluding M2M fell by 79,000 year on year in Q1 2026, while mobile service revenue declined 2.0% (Telia Q1 2026, Apr. 24, 2026). ⁵
- Telia's own commentary says competitive pressure continues in Finland's mobile consumer business (Telia Q1 2026, Apr. 24, 2026). ⁵⁵
- The consumer proposition is also changing structurally because Telia no longer owns MTV but still sells bundle-rich entertainment offers, which complicates value and retention narratives (Telia / Telia.fi, 2025–2026). ⁶⁰

Baseline metrics

- [Telia] Mobile postpaid base excluding M2M was down 79k year on year to 2,396k at March 31, 2026 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Telia] Mobile service revenue in Finland declined 2.0% like for like in Q1 2026 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵

- [Telia] Postpaid mobile ARPU was EUR 19.3 in Q1 2026, up 1.0% year on year, showing that value-per-user improved even as users declined (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Industry Finland] Telia's mobile subscription share in 2024 was about 30%, versus 38% for Elisa and 31% for DNA (Traficom, Nov. 14, 2025). ¹²
- [Telia] Broadband subscriptions rose by 9k year on year and broadband ARPU rose 8.2%, indicating that retention and growth dynamics differ materially by product line (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵

Supporting evidence

- The pressure is visible in reported subscriber and revenue trends, not just anecdote. ⁵
- Telia itself says Finland's mobile consumer market remains competitive. ⁵⁵
- Product mix is shifting, which complicates simple churn interpretation. ⁶¹

Audience fit — Head of Sales Support B2C, Senior Brand Manager, Head of Development Consumer Products, Head of B2B Customer Insights.

Cross-functional hooks — CRM & Development Lead, Head of Business Intelligence, Service Management, Finance.

Title — Fraud cases escalate faster than teams can triage

Challenge statement — “The attack surface is growing across customers, channels, partners, and products, but case handling still depends too much on manual interpretation and fragmented escalation paths. We are good at reacting to obvious problems; we are slower on pattern recognition and coordinated response.”

Why now

- Telia's 2024 security foresight report says hacker attacks and cyber-crime are escalating rapidly (Telia Insight / Foresight Report, Sept. 2024). ⁶²
- Telia's own product signals show fraud prevention now embedded in customer security offerings such as Telia Safe (Telia Q3 2025, Oct. 23, 2025). ³³
- The AI Act timeline now matters operationally: AI literacy obligations and prohibited-use rules are already in force, and most remaining obligations apply from August 2, 2026 (Telia prospectus, Feb. 13, 2026). ⁶³

Baseline metrics

- [Telia] 2,396k mobile postpaid subscriptions excluding M2M at March 31, 2026, representing a large consumer-facing attack surface (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Telia] 627k broadband subscriptions at March 31, 2026 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Industry Finland] 9m mobile subscriptions were in use nationally at end-2025 and 72% were used by private household consumers (Traficom, Apr. 11, 2025). ⁵⁸
- [Group] Telia had 14,498 employees in continuing operations at year-end 2025, which is relevant for internal AI literacy and control rollout scale (Telia Annual Report 2025, Apr. 9, 2026). ⁶⁴
- [Regulatory] Most AI Act obligations apply from Aug. 2, 2026 (Telia prospectus, Feb. 13, 2026). ⁶³

Supporting evidence

- Telia explicitly links digital resilience to avoiding downtime, breaches, and trust loss. ⁶²
- Fraud prevention is already showing up in customer-facing security products. ³³
- The new regulatory environment raises the bar for traceability and governance of automation in risk workflows. ⁶³

Audience fit — CISO, Security Specialist, Director Service Management Assurance & Operations, Head of B2B Customer Operations.

Cross-functional hooks — CIO, Head of Generative AI, Finance Director, Large Corporate Customers, SME Customers.

Title — Release trains stall around legacy dependencies

Challenge statement — “Too many deliveries still slow down when they hit old process logic, brittle integrations, or data that nobody fully trusts. We do not feel the cost as one big outage; we feel it as constant drag on speed, coordination, and confidence.”

Why now

- Telia’s broader efficiency program targeted annual savings of at least SEK 2.6bn from September 2024, putting real pressure on delivery productivity and simplification (Telia, Sept. 4, 2024). ⁶⁵
- Finland announced a proposed net reduction of around 200 positions in Q1 2026 as part of continuing simplification and efficiency work (Telia Q1 2026, Apr. 24, 2026). ⁵
- Public Finland-specific stack signals point to a layered environment rather than a clean-sheet one: dated Salesforce/Vlocity in CRM/CPQ/BSS, NICE automation in operations, Telia ACE in contact center, ServiceNow GRC at group level (multiple sources, dated/mixed-quality). ⁶⁶

Baseline metrics

- [Group] Telia’s change program targeted annual savings of at least SEK 2.6bn (Telia press release, Sept. 4, 2024). ⁶⁵
- [Telia] Finland proposed a net reduction of around 200 positions in Q1 2026 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Telia] Finland revenue was SEK 14,956m and service revenue was SEK 12,844m in FY2025, so small delivery frictions compound at real scale (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Telia] Finland adjusted EBITDA margin was 31.3% in FY2025 on an analyst calculation, leaving less room for chronic inefficiency than high-margin peer units such as Norway’s 45.2% in Q1 2026 (underlying Telia figures: Apr. 24, 2026). ⁵
- [Dated signal] Salesforce/Vlocity was publicly linked to Telia Finland’s digital transformation in 2017 and should be read as legacy context, not current proof (Diginomica, Sept. 5, 2017). ³⁷

Supporting evidence

- Simplification is a declared financial priority at group level. ⁶⁷
- Finland is explicitly part of the current organizational simplification wave. ⁵
- Public stack signals suggest accumulated layers rather than a single transformed system landscape. ⁶⁸

Audience fit — Finland CIO, Head of IT Execution & PMO, Release Manager, RTE / Execution Orchestrator.

Cross-functional hooks — Head of OSS, CRM & Development Lead, Product Owner, Finance Director, Vendor Management.

Title — Skills gaps surface after strategy has moved

Challenge statement — “We are asking managers and teams to work in new ways faster than we can reliably map, build, and redeploy the necessary skills. By the time a gap is visible in performance, it is already delaying delivery or weakening control.”

Why now

- Telia’s investor messaging says there is a growing need to secure competence to capture future AI opportunities (Telia investor material, 2025). ⁶⁹
- Finland is going through simplification, including the proposal to reduce around 200 positions, which raises redeployment and capability-risk questions immediately (Telia Q1 2026, Apr. 24, 2026). ⁵
- AI governance now includes literacy expectations under the EU AI Act, and Telia’s own human-rights policy emphasizes responsible use, fairness, transparency, and accountability (Telia policy / prospectus, 2026). ⁷⁰

Baseline metrics

- [Group] 14,498 employees in continuing operations at year-end 2025 (Telia Annual Report 2025, Apr. 9, 2026). ⁶⁴
- [Telia Finland] 3,912 average employees in Finland in 2024, the latest country-level public figure found (Telia Annual Report 2024, Apr. 9, 2025). ⁷
- [Telia Finland] Proposed net reduction of around 200 positions in Q1 2026 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Group compliance] 98% of all employees had completed Telia’s Code of Conduct training by Q3 2025, showing the scale at which capability programs are already run (Telia Q3 2025 presentation, Oct. 23, 2025). ⁷¹
- [Regulatory] Most AI Act obligations apply from Aug. 2, 2026 (Telia prospectus, Feb. 13, 2026). ⁶³

Supporting evidence

- Telia has publicly connected future value capture to competence, not just tooling. ⁶⁹
- Finland’s simplification program increases the urgency of workforce reconfiguration. ⁵
- Responsible-use expectations are now explicit in company policy as well as law. ⁷²

Audience fit — People Partner, L&D Partner, Head of Generative AI, CIO.

Cross-functional hooks — CISO, PMO, Networks, Finance, Business Intelligence.

Title — Forecasts lag the business they are steering

Challenge statement — “We still run planning and performance conversations on summaries that arrive after the mix has already moved. That makes it harder to react to shifts in subscriber quality, product mix, and delivery cost while they are still manageable.”

Why now

- Finland’s Q1 2026 picture was mixed: service revenue up 0.3%, adjusted EBITDA up 1.3%, mobile service revenue down 2.0%, but business solutions up 5.1% and broadband up 7.6% (Telia Q1 2026, Apr. 24, 2026). ⁵
- Telia’s 2025–2027 group ambitions are modest but exacting: 2% CAGR in service revenue, 4% CAGR in adjusted EBITDA, and CAPEX below SEK 14bn per year (Telia, Apr. 9, 2025 / Apr. 24, 2026). ⁷³
- Capex discipline tightened further in 2025, with Telia lowering its full-year capex outlook to around SEK 13bn in Q3 2025 (Telia, Oct. 23, 2025). ⁷⁴

Baseline metrics

- [Telia] Finland revenue was SEK 14,956m in FY2025 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Telia] Finland service revenue was SEK 12,844m in FY2025 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Telia] Finland adjusted EBITDA was SEK 4,682m in FY2025 (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Telia] Mobile postpaid subscriptions excluding M2M fell by 79k year on year in Q1 2026, while broadband grew by 9k and TV by 8k year on year (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Group] 2025 actual CAPEX excluding licenses, spectrum fees and right-of-use assets was SEK 13,443m on revenue of SEK 80,982m, or about 16.6% on an analyst calculation (Telia financial overview, 2026). ⁷⁵

Supporting evidence

- Finland’s product-mix motion is asymmetrical, which punishes lagging reports and coarse planning. ⁵
- Group targets leave little room for poor prioritization. ⁷³
- Capital discipline has already tightened in-year, making planning responsiveness more valuable. ⁷⁴

Audience fit — Director Finance, Head of Business Intelligence, Head of Strategic Portfolio Management, Development Manager Operational Excellence.

Cross-functional hooks — CIO, PMO, B2B Development, Networks, Consumer Products.

Title — Data accountability is weaker than digital ambition

Challenge statement — “We are moving faster with new tools and new decisions than with the controls that explain where the data came from, how it was changed, and who owns the outcome. That creates friction with risk, confidence, and adoption all at once.”

Why now

- Telia says AI now spans customer service, networks, and internal processes, which widens the number of business decisions touched by models and automation (Telia Q1 2026, Apr. 24, 2026). ⁴⁹
- Telia's March 2026 human-rights policy explicitly raises the bar on responsible AI, fairness, transparency, and accountability (Telia policy, Mar. 11, 2026). ⁷⁶
- The AI Act timeline is now close enough that operating-model questions cannot stay abstract; most obligations apply from Aug. 2, 2026 (Telia prospectus, Feb. 13, 2026). ⁶³

Baseline metrics

- [Group] AI use is publicly described across at least three domains: customer service, networks, and internal processes (Telia Q1 2026, Apr. 24, 2026). ⁴⁹
- [Group] 14,498 employees in continuing operations at year-end 2025 will need controls, literacy, or role clarity around these systems (Telia Annual Report 2025, Apr. 9, 2026). ⁶⁴
- [Telia Finland] 2,396k mobile postpaid subscriptions excluding M2M and 627k broadband subscriptions create large-scale data lineage and decisioning implications in Finland alone (Telia Company Q1 2026 interim report, Apr. 24, 2026). ⁵
- [Regulatory] AI literacy and prohibited-use provisions are already in force; most remaining AI Act duties apply from Aug. 2, 2026 (Telia prospectus, Feb. 13, 2026). ⁶³
- [Governance signal] Telia's human-rights page says the company strengthened commitments on AI ethics and responsible AI (Telia, 2026). ⁷⁷

Supporting evidence

- Telia's ambition is now broad enough that governance can no longer sit only with one specialist team. ⁷⁸
- Company policy now explicitly names fairness, transparency, and accountability. ⁷²
- Regulation is moving from discussion to operational deadline. ⁶³

Audience fit — Head of Generative AI, CISO, CIO, Security Specialist.

Cross-functional hooks — Finance, HR / L&D, OSS, CRM & Development, Business Intelligence.

Risks and sensitivities

Facilitators should handle several topics carefully.

- **Restructuring sensitivity is real.** Telia Finland announced a proposed net reduction of around 200 positions in Q1 2026, and this sits inside a broader Telia change program targeting at least SEK 2.6bn of annual savings. A workshop that sounds casual about productivity or automation could land poorly if it ignores the human context. ⁷⁹
- **Media is politically and emotionally sensitive in Finland.** Telia divested TV & Media, including MTV in Finland, to Schibsted in 2025, but Telia still sells media bundles to customers. That means there may be unresolved feelings or sensitivities around brand ownership versus customer proposition. ⁸⁰
- **Vendor relationships should not be trivialized.** Nokia is visibly tied into Finland mission-critical 5G work; Valokuitunen is strategically important to fibre; ServiceNow and customer-operations

tooling appear embedded in parts of the organization. Publicly visible stack signals are mixed-confidence, so facilitators should avoid overconfident statements about current architecture.

81

- **Defense and public-sector opportunity is upside, but also sensitivity.** Telia's NATO framework supplier approval and the 5G slice handover work with the Finnish Defence Forces can make for compelling examples, but they also sit close to security, sovereignty, and public-sector procurement boundaries. 82
- **AI maturity may be uneven across the room.** Public evidence suggests some teams will have direct production exposure while others will mainly know the group narrative. If the day assumes a uniform maturity level, the conversation may drift into defensiveness or abstractness. This is analyst inference from the uneven public record.

Open questions

These are the highest-value gaps to close with the Telia sponsor before the day.

- What are the **top three Finland business outcomes** the CEO wants this session to sharpen: consumer retention, B2B growth, cost-to-serve, release velocity, risk control, or something else?
- Which **AI use cases are already in production in Finland**, by function, and which are still pilot, proof-of-concept, or blocked?
- What is the actual remit of the **Head of Generative AI in Finland**: platform, governance, enablement, use-case delivery, or something broader?
- Which **data and platform constraints** are most painful today: CRM/BSS, OSS, data quality, integration, identity, security review, procurement, or change adoption?
- Where are the **largest cross-functional handoff failures** today: sales-to-delivery, care-to-network, network-to-field, product-to-release, or finance-to-operations?
- What are the **non-negotiable guardrails** for the day: topics to avoid, vendors not to spotlight, workforce issues to handle delicately, or programs already politically charged?
- How does Telia Finland currently measure **customer-contact efficiency, release flow, field productivity, sales productivity, and fraud response time**?
- What is Telia Finland's current **EU AI Act readiness model**: who owns policy, register, risk classification, testing, human oversight, and literacy?
- Which **public-sector and mission-critical growth bets** matter most in Finland over the next 12–24 months?
- Which challenges would the sponsor most like mixed teams to tackle because they are **important but currently orphaned between functions**?

What the facilitator should walk in knowing

- Telia Finland is a large core business, but right now it looks more like a **performance-improvement story** than a breakout-growth story. 22
- The most important strategic fact is that **Finland is unusually enterprise-heavy** for Telia, with about half of revenue tied to Enterprise customers by Telia's own pre-Q1 2025 framing. 6
- Consumer mobile is the clearest visible pain point: **service revenue down 2.0% and postpaid base down 79k year on year** in Q1 2026. 5
- Finland is one of Europe's hardest telecom markets because the basics are already very good: **99.5% 5G coverage, huge data usage, fast fibre expansion, and three strong national operators.** 83

- Telia's public AI story is real, but the public proof is strongest in **customer service and broad group ambition**, not in deeply documented Finland execution across every function. ⁸⁴
- The room is likely to respond best to challenges about **decision latency, handoffs, and execution drag**, not generic "AI transformation" language.
- Fibre and convergence are not background topics; **Valokuitunen is a central strategic lever** for Finland now. ²⁴
- Security and mission-critical services are an unusually credible growth narrative in Finland because of **NATO supplier approval and defense-adjacent 5G work**. ⁸²
- This is a sensitive moment organizationally because **simplification and workforce reduction are already on the table**. ⁷⁹
- If the day lands well, it will be because leaders see that the real opportunity is not "doing AI," but **removing friction from the places where Telia Finland is already losing time, margin, or customers**.
